

Smart Arming

Automated security that fits your lifestyle

Ensure a customer's home is secure while preventing false alarms and costly fines. Smart Arming remembers to arm and disarm a customer's security system at a pre-set time or based on their activity. Offer customers the full value of your service—security included—with as little hassle as possible.

Security on Schedule

- + Sleep with a calm mind by setting the system to auto-arm before bedtime.
- + Simplify morning routines by setting the system to auto-disarm when a hallway motion sensor is activated.
- + Easy setup ensures customers never have to remember to arm and disarm.
- + Host guests with varying schedules without the worry of triggering costly false alarms.
