

Water Dragon™

An affordable, no-plumber-needed water monitoring solution

With this easy-to-install, 24/7 whole property leak detection solution, it's never been easier or more affordable for customers to prevent water damage.

Key Features

Whole-property water protection

Using ultrasonic pulses to detect the flow of water, the Water Dragon can monitor the water flow for an entire property, alerting customers when there is unusual water activity and avoiding costly repairs.

Easy to install

Featuring a clip-and-zip design, the device installs in under 10 minutes and can be added in tight, hard-to-reach places. Just snap the clips onto the main water line pipe, zip tie them together, secure the device, and connect to power.

Monitors and alerts

The Water Dragon also monitors pipe temperature and alerts property owners to potential frozen pipes. Through the app, customers can view water trends for the day, week, or month to track usage over time and change their consumption to conserve water and save money on their utility bills. Pair it with a retrofit water valve, like the IQ Water Valve, to automatically shut off water when a leak or frozen pipe is detected.

Visit the Alarm.com Partner Portal to purchase the Water Dragon™ and access support resources.
