

Cell Connector

Simplify installations while expanding customer access control use cases

Running access control wiring and managing network connectivity can be time consuming and expensive. The Cell Connector ensures the safety and security of an access control system for business owners while reducing potential installation and maintenance burdens.

Key Features

Bypasses the local wired connection

Offer customers the Cell Connector featuring 4G LTE connection to ensure that an unreliable network doesn't get in the way of business security.

Compatible and reliable

The Cell Connector works seamlessly with Alarm.com for Business access control systems and is compatible with Mercury and Aero controllers.

Use Cases

- + When access control is needed from a distance
- + When network reliability is spotty
- + To bypass a firewall for a direct, secure cellular connection
