

Connected Fleet

A cloud-based fleet management system

Connected Fleet provides real-time fleet data to optimize productivity, reduce vehicle costs, and generate data-driven actionable business insights.

Key Features

Enterprise and single-system management dashboards

Manage fleet maintenance needs, evaluate driving behaviors, and track vehicle locations in real-time with the Connected Fleet Enterprise and Single-System Dashboards

Fuel monitoring and notifications

Access your fleet's fuel consumption and efficiency to track costs and save money. Get real time notifications when vehicles encounter trouble, such as a check engine warning.

Field Trip Reports

Get Field Trip Reports on demand through our unified platform for a breakdown of your fleet operations—or have them sent to your email automatically on a monthly, weekly, or daily basis.

Easy to install, easy to connect

Install Connected Fleet in seconds—just plug the device into your vehicle's OBD-II port and you're done. The ADC-3035L Car Connector uses reliable cellular signaling, making sure your vehicles are online wherever they go.

Visit the [Alarm.com Partner Portal](#) to purchase Connected Fleet and access marketing, installation, and support resources.
