

Flex IO™

Monitor more of what matters — without boundaries

Flex IO is a battery-powered cellular sensor (LTE-M) for monitoring remote property, perimeter, or assets. Use Flex IO as a standalone awareness solution, or add it to your existing security system for increased coverage.

Key Features

Built to last

Flex IO is built tough, with rugged weatherproofing designed specifically for the outdoors. With extensive LTE cellular coverage, an estimated battery life of 2+ years,* and optional auxiliary power,† the Flex IO ensures reliability to match your unique property needs.

Instant awareness

Real-time alerts give instant awareness of your remote property. Stay informed when distant entry doors are left open, or when perimeter gates are accessed. Remain aware when remote assets are unlocked, secured, or tampered with.

Use Flex IO to monitor:

- + Perimeter Fences
- + Equipment Sheds
- + Vehicle Gates
- + Warehouse Entry
- + Outbuilding Access
- + Storage Containers
- + Secured Merchandise
- + Satellite Trailers

Contact your local service provider or find one at www.alarm.com.

*Battery life estimates based on an expected daily traffic of 10-12 events per day
†Optional. Flex IO Gate Control requires external power (6-15 VDC) to relay open commands

Storage Unit A280 was Closed.

Mower Lot Lockup was Opened.

South Gate was left open.
