

My Circle

The easiest way for families and loved ones to stay connected

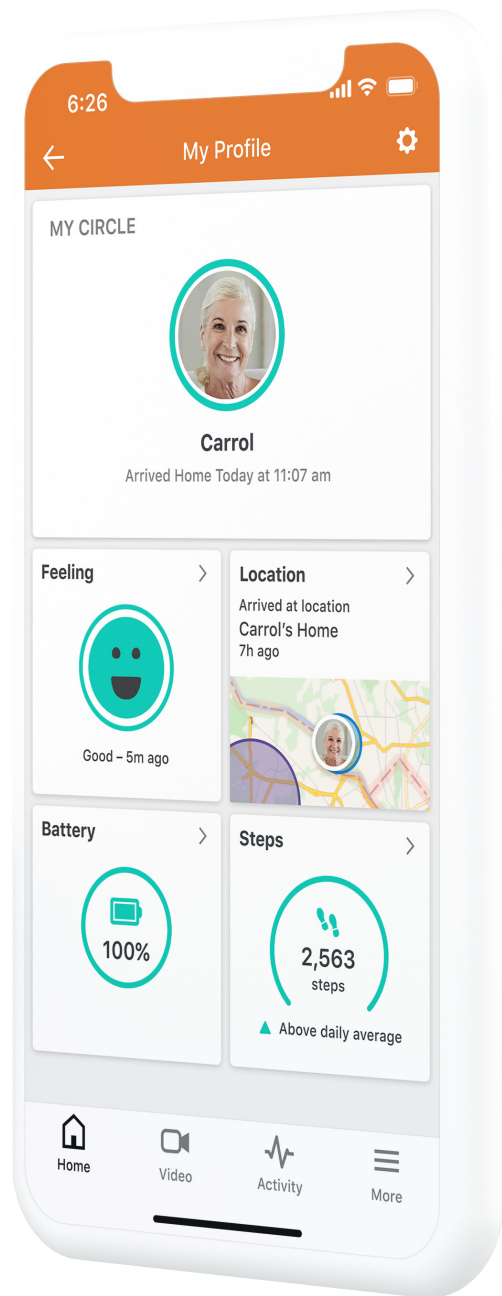

Introducing My Circle, a Personal Safety & Awareness product that helps your customers know their loved ones are okay—even when they're apart.

My Circle uses data from a loved one's phone to share the full story about how they're doing. With the at-a-glance dashboard, real-time alerts, and self-reported wellbeing updates, My Circle offers your customers a virtual safety net to keep families safer and more connected than ever before.

Customers can access information about their loved ones right in the app and receive proactive alerts that help them take action if a potential issue is detected.

Key Features

- + My Circle's dashboard highlights a loved one's activity, how they're feeling, whether they're home or away, and more
- + Color-coding makes it easy to quickly convey if all is well (green) or if there may be a need to check in (red)
- + Real-time alerts operate as an early warning system to address potential issues before they worsen; multiple family members or loved ones can receive notifications
- + My Circle is an app-based feature requiring no additional hardware or onsite installation

Visit the [Partner Portal](#) to access service package pricing, installation, and support resources.

Gain the whole picture of wellbeing

My Circle collects and analyzes data for your customers in four main categories:

FEELING

Loved ones share how they're feeling with just one tap in the app.

LOCATION

Customers can receive alerts when loved ones leave and return home based on a set Home location via Alarm.com Places.

BATTERY LEVEL

Users can view a loved one's phone battery level and receive an alert if it gets too low.

ACTIVITY

Daily step counts are viewable and customers can get alerts if no steps are detected in 24 hours.
